Miratlas joins the France Deeptech association

Collaboration will enable cost-effective deployment for optical ground segment at scale.

Miratlas, a company specializing in technological innovation for optical and meteorological systems, is proud to announce its membership in France Deeptech, an association that brings together key players in technological development in France.

Under a year since its launch on November 29th 2023, France Deeptech is already counting over 270 members, including research laboratories, start-ups, and investment funds. The association aims to turn French technological innovations into European champions through concrete and rapidly applicable measures.

Miratlas' membership in France Deeptech marks a new milestone in our commitment to actively contribute to the French technological innovation ecosystem. With the four thematic working groups established by France Deeptech – focusing on financing, technology transfer, life science regulations, and public procurement – we are eager to bring our expertise and participate in the development of innovative solutions.

Miratlas is committed to supporting this dynamic and strengthening synergies between the players in the deeptech ecosystem, creating new opportunities for growth and transformation within the technology industry.

About Miratlas

Founded in 2018 by Jean-Edouard Communal and Frédéric Jabet, Miratlas is a deep-tech company which designs, manufactures and sells the Sky Monitor, and provides continuous, real-time, atmospheric characterization and modelling of all the parameters impacting light transmission including cloud cover and turbulence.

Miratlas is enabling the new chapter of laser satellites communication (Fibre in the Sky), by facilitating Direct to Earth Free Space Optical Communications and the extension of the high-capacity terrestrial networks to space.
